

- Zoos breed animals, which may become extinct, in captivity
- Some almost extinct animals have been bred in zoos and then let free into the wild
- Zoos now exhibit animals in enclosures which look like their natural habitat, rather than in cages
- Zoos can't teach respect for the environment because they don't treat animals with respect
- The treatment of all our animals and their rights is important
- Zoos educate the public about how we have to get on with animals
- Zoos are a form of family entertainment
- It is now harder to touch and see animals
- Some zoos now try to make their visitors work to make the world better for animals
- Zoos provide a safe home and regular meals for the animals
- Creatures in zoos are caged and unable to grow properly
- Seeing animals in zoos will make people think that it is right to keep wild animals in captivity
